

Quality Statement Deutsche Druckfarben Ink

Deutsche Druckfarben Ink is a modern, highly pigmented ink series designed for the widest possible field of applications. Every 4-colour set is suited for almost any type of printing machines (perfecting machines as well as straight printing presses). It is free of mineral oil and based on renewable raw materials. As a result of its versatility, Deutsche Druckfarben inks are especially suited for use in large corporate groups where different manufacturing bases and various printing machines are encountered and the best performance and consistency is required with identical print results from one process ink.

The Deutsche Druckfarben Series are characterised by:-

- Excellent runability
- Excellent ink transfer
- Very high ink intensity
- Excellent ink/water balance
- Good abrasion resistance

Deutsche Druckfarben Ink fulfils all requirements of ISO-Norm 2846-1. It's colour intensity and dot sharpness allows the printer to meet all requirements of ISO-Norm 12647-2 regarding the ink properties, as well as achieving a very neutral grey-balance. It also complies with industrial standards including EN 71/3 (Toy regulations) and CONEG.

Vegetable Oil Based:

Deutsche Druckfarben inks feature good press stability, drying and rub resistance because they are based on a unique blend of oxidation drying vegetable oils and resins to overcome the disadvantages associated with competitive inks based largely on soya bean oil.

Druckfarben Global Brands and Value for Money

Deutsche Druckfarben BV is based in the Netherlands exporting worldwide as the number 1 independent European Ink Manufacturer; supplying lithographic offset printing inks and varnishes to the commercial printing and packaging sectors.

We hereby declare that Deutsche Druckfarben BV is providing **100% vegetable ink** which is reach-compliance and ISO-compliance.
